Project:

M1 Moto Trowell footbridge, U.K.

Mastergold Mono high performance roofing membrane was the product used on the project.

The challenge was to complete the works quickly and efficiently whilst the motorway was closed between the hours 10pm and 4am.

The solution was the use of a unique scaffolding structure, erected on the back of a truck, enabling quick and easy access to the site during the allocated closure hours.

The scaffolding system was a major factor in the success of the installation. The use of the Mastergold Mono also helped greatly as this single layer, flame-free flat roofing membrane is both quick and easy to apply. The work was completed in remarkable time and met the exacting standards of the Highways Agency, who signed off the project.

Type:

Refurbishment
