**Project:****Wymondham College, Norfolk, U.K.**

Mastergold flat roof membrane has provided the optimum waterproofing solution for the urgent roof refurbishment on the sports complex at Wymondham College in Norfolk. Our U.K. distributor carried out a full condition survey and found that the original waterproofing was failing, in addition to a significant amount of standing water on the roof due to insufficient falls. They recommended stripping back the roof to the concrete deck and replacing it with a new warm roof incorporating a cut to falls tapered insulation system which would solve the problems of the standing water. Mastergold was chosen due to its suitability for warm roof refurbishment applications. The 20-year warranty was an important factor in the specification, and both roofing contractor and client were impressed with the aesthetics of the charcoal mineral finish. 1200m<sup>2</sup> of Mastergold over a Rapid P Thermo-Adhesive underlay was installed.
